PROFESSIONAL SUMMARY

Senior SDET with **9 years in software** — 6 years in QA and test automation, built on 3 years as a C#/.NET developer. Specialises in **end-to-end UI automation with Playwright (TypeScript, Page Object Model)**, backed by REST API test coverage, SQL/backend validation, and CI/CD integration to shorten release cycles. **2,400+ automated tests authored in enterprise work** — including on real-time, ML-driven systems — with hands-on Postman and Docker-based test environments. The developer background bridges development and QA — reading and reviewing code to understand system behavior and design targeted tests. Daily user of Claude Code and GitHub Copilot for test generation and refactoring.

CORE SKILLS

Test Automation: Playwright (TypeScript, POM), pytest, C# / .NET Code Comprehension, Test Framework Design, Data-Driven Testing

API & Backend: REST API Testing & Validation, Postman, SQL / Backend Validation

Systems & Performance: Real-Time / ML-Driven Systems Testing, Load & Performance Testing (10K+ concurrent)

CI/CD & DevOps: Jenkins, GitHub Actions, Docker, Git, Bitbucket

Languages: C#, TypeScript, Python, JavaScript, SQL

Development: C# / .NET, ASP.NET, REST APIs, React.js, Next.js, FastAPI

Databases: SQL Server, MySQL, PostgreSQL, SQLite

Testing Types: Functional, Regression, Smoke, Integration, E2E, Cross-Browser, API, Load

AI Tooling: Claude Code, GitHub Copilot, Claude / LLM APIs, AI-Assisted Test Generation, Prompt Engineering

Methodologies: Agile, Scrum, Kanban, TDD, BDD

Also Familiar: Cypress, Selenium WebDriver

PROFESSIONAL EXPERIENCE

Senior SDET — Afiniti Aug 2020 – Present

Pakistan · AI-powered enterprise software · Promoted from SDET to Senior SDET, Feb 2022

- Authored **2,400+ automated tests** across enterprise workflows — 1,600+ in Playwright and pytest, and 800+ on a proprietary simulation framework — **reducing manual QA effort by ~40%** and stabilising release cycles.
- Ran end-to-end, integration, and load/performance testing on a **real-time, ML-driven decisioning system** — scripting high-volume simulation scenarios (10,000+ concurrent interactions) and validating routing/matching outcomes against shared-memory and SQL data stores.
- Validated the **production ML pipeline end-to-end** — from model configuration through deployment to runtime scoring — asserting model behavior and decisioning correctness in MySQL/PostgreSQL, combining QA rigor with applied ML-systems knowledge.
- Designed and maintained automated suites for functional, regression, and integration testing — building **reusable, modular test logic that became the team's standard** and significantly cut new-test authoring time.
- Built **Playwright + pytest suites with Docker-containerised execution** for identical environments across dev and CI, integrated into Jenkins pipelines with JUnit XML and HTML reporting.
- Performed comprehensive **REST API testing and backend validation** with Postman and SQL queries against SQL Server and PostgreSQL, surfacing data-integrity defects that UI testing alone missed.
- Led defect triage, root cause analysis, and live debugging during critical releases, providing production support that reduced recurring escapes.
- Leveraged **Claude Code and GitHub Copilot** to accelerate test scaffolding, generate edge-case scenarios, and refactor automation code — integrating AI tooling as a standard part of the QA workflow.

Software Engineer — Masterkey Systems Ltd May 2017 – Aug 2020

Pakistan · Enterprise software development

- Developed and maintained backend services, business logic, and **REST APIs in C# and ASP.NET** for enterprise modules, owning features from design through release.
- Built responsive, user-facing frontend features in **React.js and JavaScript**, delivering functionality end to end alongside the backend.
- Wrote and optimised complex **SQL queries, stored procedures, and schemas**, improving query performance and reliability on data-heavy modules.
- Authored test cases and ran manual testing to support QA during releases — **early hands-on testing exposure that shaped the later move into SDET work.**
- Delivered features iteratively in Agile/Scrum, contributing to sprint planning, standups, and retrospectives.

SELECTED PROJECTS

130+ automated test cases across personal portfolio projects. Full details and live demos at tajveed-portfolio.vercel.app

AZMart — Playwright Automation Suite *Playwright + TypeScript · Page Object Model*

Built a framework from scratch with ~107 test cases (~50 UI E2E across 9 specs, ~57 API integration across 7 specs) and 11 Page Object Models covering customer, checkout, and admin flows. Added security payloads (SQL injection, XSS, user enumeration, brute-force lockout) and authored full AI-First SDLC docs: Test Strategy, Test Plan, and Requirements Traceability Matrix.

A&Z Mart — Full-Stack E-Commerce Platform *Next.js 14 · FastAPI · SQLite*

Built a production-quality multi-role app (customer, seller, admin) with JWT auth, persistent cart, order tracking, and an admin CRUD dashboard. Integrated a Claude API product chatbot for natural-language discovery and a 14-currency converter with live exchange rates.

TestForge — AI Test & SDLC Generator *Next.js 14 · FastAPI · Claude API*

Built an AI tool that generates production-ready test code across 10 frameworks (Playwright, Cypress, Selenium, pytest, WebdriverIO, Robot Framework) and 8 SDLC document types from plain-English input, with real-time streaming output via Server-Sent Events.

EDUCATION

Bachelor of Science in Computer Science Aug 2011 – Aug 2016

Karachi Institute of Economics and Technology (KIET), Pakistan

PROFESSIONAL DEVELOPMENT & LANGUAGES

Currently Upskilling: Microsoft Power Platform testing (Power Apps, Power Automate) — Pluralsight, in progress

Languages: English — Professional Working Proficiency (B2)
